- Location: Ho Chi Minh City, Vietnam

Professional Summary

DevOps Manager with 10+ years of experience leading secure, scalable platforms across cloud and on-prem environments, specializing in DevSecOps governance, Kubernetes platforms, Anycast-based security, and enterprise identity & compliance.

Core Competencies

DevSecOps & Platform Engineering

- DevSecOps Strategy & Governance
- Secure-by-Design CI/CD & GitOps
- Platform Guardrails & Policy Enforcement
- Release Governance & Audit Readiness

Kubernetes Platform Engineering

- Platform Architecture & Governance
- Multi-Cloud & On-Prem Platform Strategy
- Container Orchestration & Workload Management

Anycast Networking & Application Security

- Anycast Architecture & Global Traffic Management
- WAF & DDoS Protection Strategy
- Application Security & Threat Mitigation

Cloud & Identity Security (Zero Trust)

- Enterprise Identity & Access Governance
- Zero Trust Architecture & Policy Enforcement
- Cloud Security Posture & Compliance

Observability & Reliability Engineering

- SLO / SLA Management & Service Reliability
- Performance & Capacity Planning
- Distributed Systems Observability

Tools & Technologies

Kubernetes, Docker, Helm, ArgoCD, GitLab CI, Jenkins, GitHub Actions, AWS, VNG Cloud, HAProxy, Nginx, APISIX, Prometheus, Grafana, Loki, Tempo, PostgreSQL, MySQL, Redis, Kafka, Azure AD / Entra ID, Microsoft 365, SonarQube

Professional Experience

DevOps Manager

VNG Corporation – Ho Chi Minh City, Vietnam | Jun 2020 – Present

- Led enterprise-wide DevSecOps transformation across VNG-DB (GreenNode) and multiple mission-critical platforms, ensuring secure, compliant, and reliable delivery.
- Acted as the primary technical decision-maker for platform, security, and delivery standards across multiple product teams.
- Architected and governed Kubernetes-based platforms (on-prem and cloud) using security-by-design and platform engineering principles.
- Owned the CI/CD and GitOps standards for Kubernetes-based platforms, with embedded security controls, approval workflows, and environment governance.
- Integrated DevSecOps practices into delivery pipelines, including code quality gates, dependency governance, container image hardening, secret management, and change traceability.
- Established platform-level security guardrails covering identity, network segmentation, access control, and runtime protection for containerized workloads.
- Established centralized observability and security monitoring capabilities, enabling proactive detection of reliability and security risks across enterprise platforms.
- Collaborated closely with security, audit, and compliance teams to support ISO 27001, SOX, and SOC 2 requirements from infrastructure and pipeline perspectives.
- Led and mentored a DevOps team of 8 engineers, fostering a shared-responsibility DevSecOps culture across engineering teams.
- Oversaw enterprise identity and access management (Office 365, Azure AD / Entra ID, Zero Trust) for thousands of corporate users.

Senior DevOps Engineer / Team Lead

VNG Corporation – Ho Chi Minh City, Vietnam | Apr 2017 – Jun 2020

- Introduced DevSecOps foundations into infrastructure and application delivery, focusing on secure deployments, auditability, and operational consistency.
- Owned high-availability database platform architecture and operations, ensuring data resilience and operational continuity for mission-critical workloads.
- Established containerization standards and security-hardened image governance for enterprise systems.
- Owned CI/CD standards with integrated quality and security gates, improving delivery confidence and traceability.
- Governed large-scale enterprise storage architecture with strong access control and authentication standards.
- Led collaboration platform migration (Google Workspace → Office 365), implementing Azure AD synchronization and Zero Trust access models.

Senior System Engineer

VNG Corporation – Ho Chi Minh City, Vietnam | Apr 2015 – Apr 2017

- Owned secure enterprise infrastructure services architecture, including mail relay, directory services, and remote access platforms.
- Defined security-focused system architectures for internal communication and identity management.
- Established containerization standards for internal services, improving isolation and reliability.
- Owned high-availability platform architecture for streaming and web services supporting corporate use cases.

System Administrator

VNG Corporation | Apr 2014 – Apr 2015

- Owned enterprise IT systems governance with a focus on stability, access control, and operational automation standards.
- Established standardized deployment and maintenance procedures for internal platforms.

System Administrator

YeuTheThao.com | Aug 2012 – Jan 2014

- Owned high-traffic web infrastructure architecture, ensuring scalability and reliability for consumer-facing applications.
- Established DDoS mitigation and system hardening standards for web infrastructure.
- Governed on-premises mail and directory services architecture and operations.

Key Projects

Virtual WAF (vWAF) Anycast Platform

Architect / DevSecOps Lead

- Provided a centralized, reusable security platform for protecting internet-facing enterprise applications at scale
- Owned the end-to-end architecture of a multi-node, multi-region Anycast WAF platform designed to protect high-traffic, internet-facing applications
- Defined security capabilities including HTTP Flood DDoS protection, bot mitigation, intelligent semantic analysis, and rule-based threat detection
- Established automated certificate lifecycle management for large-scale domains, delivering a resilient security layer capable of sustaining large traffic volumes

Enterprise Email & Identity Migration (Google Workspace → Microsoft 365)

Architect / DevSecOps Lead

- Led enterprise-wide migration of email and collaboration services from Google Workspace to Microsoft 365 with minimal business disruption
- Owned identity architecture design using Microsoft Entra ID synchronized with the HR system, enabling centralized identity lifecycle management
- Established joiner/mover/leaver automation and identity lifecycle governance
- Defined Zero Trust access policies including MFA, Conditional Access, and RBAC
- Hardened Microsoft 365 and Azure tenant security posture to meet enterprise security standards

Dcorp (F&B; Platform) – Freelance

Architect / DevOps

- Architected and delivered a cloud-native application platform for F&B; operations, ensuring scalability and reliability
- Owned platform architecture including API gateway integration and centralized authentication services
- Established secure CI/CD standards and high-availability database architecture
- Defined observability and auto-scaling strategies to ensure platform reliability and performance

Payment System – U.S. Nails Chain – Freelance

Architect / DevOps

- Architected a cloud-native payment processing system, ensuring security, compliance, and scalability for financial transactions
- Owned event-driven architecture design for transaction processing, enabling high-throughput and fault-tolerant operations
- Established CI/CD governance and observability standards, ensuring delivery confidence and operational visibility
- Delivered high-availability platform architecture with load balancing, auto-scaling, and distributed tracing capabilities

Education & Certifications

Education

Bachelor of Systems Engineering

Sai Gon University | 2008 – 2012

Certifications

AWS Certified Solutions Architect – Associate
